

MYOB Accountants Enterprise

Tax

Improve your practice productivity. Accountants Enterprise Tax is the industry leading software for the preparation, lodgment and total management of your clients' income tax affairs. As a cornerstone product in the Accountants Enterprise suite, Tax is packed full of features to help your practice become more productive. It reduces the time you spend preparing tax returns, freeing you up to offer more value-added tax consulting services to your clients.

Tax supports all major ATO forms and Activity Statements and it automatically shares data between worksheets, forms and other returns to get you lodging faster. Here are just some of the many reasons why accounting professionals choose MYOB software to lodge over 5,000,000 tax forms every year.

Get it right first time

Tax is compliant with the ATO's practitioner lodgment service (PLS) and is built around a lodgment validation engine specifically designed by the MYOB team to exceed the ATO's minimum requirements. Accounting firms using Tax achieved a lodgment acceptance rate in excess of 99% during 2016/2017 lodgment programs. This means you can be confident the forms you lodge are complete and compliant before you press the button.

Never lose sight of your lodgment status

Personalised homepages help you and your team monitor tax return lodgments with great ease. Tax provides a standard set of tax views which you can customise to meet your practice needs. You can easily view and filter data and drill down to access more information about the return without having to run a report.

Every member of your practice has unique information needs. What's important to partners will differ from the day-to-day focus of employees or administrators.

Tax enables everyone to customise their homepage to provide at a glance all the information that's important to them. With one glance you and your staff can get a quick overview of what needs attention, so nothing is missed.

Monitor and manage your business easily

Tax has a flexible and easy-to-use tool for reporting across your tax database. It has a range of standard reports to track lodgments and to data mine the most common income and expense items. It is easy to use – simply tick to select the required tax fields onto the page and run your report. You can use this tool throughout the year, to help you get the most out of your tax data for monitoring, managing and marketing your business.

Provide extra value effortlessly

Tax's 'what if' calculator gives you the information to make it easy to offer higher value services like tax planning. You can use it to create scenarios for the current and future financial year with minimal data entry.

About Accountants Enterprise

The MYOB Accountants Enterprise suite is purpose-built for today's multi-partner accounting practice. The suite delivers extended functionality that can be customised to suit your unique workflows and reporting needs. Through tight integration, key information such as contacts, employees, security and reporting are accessible across the suite. Enter data once and it's automatically shared.
